# Was ist neu in Quria?

Dieser Inhalt steht nur auf Englisch zur Verfügung.

## Version 1.7.7.3

Release date: October 18, 2021

For some new pieces of functionality in this release, a few texts in the user interface may be displayed in English even when another language is selected.

### CIRCULATION

- If the RFID-status is not correct in relation to the item status, it is now possible to change the RFID-status both in the Check out and Check in windows.
- Only items with no transaction status or with the following transaction statuses can be deleted:
  - Available
  - In transit
  - Trapped (cancelled)
  - Trapped, in transit (cancelled)
  - Internal handling: ILL out cancelled
  - Bill paid
  - Received

If an item has any other transaction status, e.g. **On loan** or **Trapped**, it is not allowed to delete the item. (SR00106428, IN00107006, IN00106813)

- Performance improvements have been made for checking in of billed items (IN00106440)

### ACQUISITIONS

- Invoices - development in progress: Support for invoice handling has been prepared, and there are a few new permissions that activates the new functionality. Since the functionality is not finished, you must not activate these new settings yet.
- An adjustment has been made for the import of order messages from Biblioteksentralen SA for setting of prices for the item in Quria by import. The price is added to **Item details** and to **Order information/About this title** in **Acquisitions**.
- The information in the list of budgets under **Settings/Budgets** now shows organisation and department, and for new budget periods the warning percentage is set to 100% by default.
- You can now open a work by clicking its title in **Requisitions** and **Orders**.

### ANALYTICS

- There is a new module for Author fund reporting (SE) for Swedish customers that need to be activated. The report can be found under **Configuration/ Admin/Year end tasks**.
- To make it easier to find the saved reports you are looking for, it is now possible refine the list of

reports based on report type, data sources and private/public reports.

- An issue with producing statistics based on gender has been fixed (IN00097555)

## COLLECTIONS

- Search: It is now possible to scan a barcode and find the related work. Some details might be useful to know: A general search is first made, and if there is no hit there will be an additional search on item based on the given search criteria. This means that if you get a general search hit on the barcode, there will not be a search done on item. But this should be a rare case. Also, if more than one search criteria are entered, no item search will be performed, which means that barcodes with space will not be found.
- Search: The organisation filter now includes all accounts if your system setup includes more than one.
- Bulk handling of items: You can now add and remove manual item statuses and set temporary location in bulk under **Collections/Items/Change data**.
- Bulk handling of items: It is now possible to search on value **Not set** for most of the dropdown menus to make it possible to find items that have no value set, for example no department or no section.
- Item handling: The updated functionality in the previous release to secure item handling over account borders entailed that the controls became a bit harsh. In general, the following applies for handling single items as well as bulk handling of items:
  - Items that belong to your own account can be relocated and temporary located within the home account regardless of transaction status.
  - Items that belong to your account can be relocated and temporary located to other accounts as long as the item has no transaction status or one of:
    - Available
    - In transit
    - Trapped (cancelled)
    - Trapped, in transit (cancelled)
    - Internal handling: ILL out cancelled
    - Bill paid
    - Received
  - For ILL In items the following applies:
    - ILL In items can never be handled in Collections/Items
    - ILL In items cannot get a temporary location
    - ILL In items cannot get an updated item type
- Shelf list: It should now be possible to expand the shelf list rows and the items for each row without problems. We finally found the root cause and cannot reproduce the issue any longer. Please contact Axiell if you still experience problems related to this. (IN00095093)

- A new option, **Move items**, offers the possibility to move items from one manifestation to another one when there is a need for this. There are some restrictions regarding which items can be moved. You can only move:
  - Items that belong to your own account
  - Non-ILL In items
  - Items that are not trapped, checked out or on order

This functionality is only available to users that have been granted the new permission **Collections: Move items**. You find the **Move items** option in the manifestation context menu in **Collections**. Learn more in the online help: **Verschieben eines Mediums zu einer anderen Manifestation**

- It is now possible to update item details with the following exceptions:
  - Item number cannot be updated for items on loan.
  - Item type can never be updated for incoming ILL items.

(IN00097805)

#### METADATA

- An adjustment has been done to the mapping of manifestation for media type **tactile/Braille** so that they are displayed with the manifestation type **Braille**.
- A minor fix has been done in field mapping by import of MARC-field 300a, b and c. (SR00093109)

#### PATRONS

- For patrons that lack address information or marked with Protected identity mark (sekretessmarkering), the text **Return to sender** is printed.
- It is now possible to search for bills in bulk on the **Bills** tab of the **Patron** page. It is also possible to settle or close bills from here. This functionality is only available to users that have been granted the new permission **Patrons: Bills**. Learn more in the online help: **Nach Rechnungen suchen**
- An issue with display of the wrong context menu item for Norwegian national card (**Mark/Unmark a card as national**) has been fixed.
- Bulk handling of patrons: It is now possible to multiselect patron categories, custom fields, communication languages and membership types to be able to search more efficiently.
- Performance improvements have been made for display of notifications on the **Patrons** page.
- Overdue warnings can now be resent.
- An issue with not being able to access a patron under certain circumstances has been fixed (IN00106366)

#### ROLES AND PERMISSIONS

- There are 2 new permissions - **Collections: Move items** and **Patrons: Bills**, for functionality described in separate sections of the release notes.

- There are 3 new permissions for **Acquisitions: Invoices** - this functionality is development in progress, and you must not activate these new settings yet.

## INTEGRATIONS

- Quria now offers the option to link to a map in Arena if you have an agreement with a map provider. Please check with your map provider for correct URL. Additionally, the map module needs to be activated by Axiell staff. Learn more in the online help: **Map**
- Bills with titles of more than 60 characters were rejected when they were sent to Visma. To prevent this, a smaller fix is made that cuts titles of more than 60 characters, including the field heading, before the bills are sent to Visma.

## OPEN LIBRARY

- An issue with access to Open Library has been fixed (IN00105977)

## USER INTERFACE

- The terminology for Open Library (formerly referred to as Self-service library in English) has been updated in many languages.

Home page: A fix has been made for an issue that caused the list of most reserved titles sometimes not to be shown. (IN00108664)

## ILL

- Creating reservation for a library: No outgoing ILL request was created if the patron was searched for or by selected using **Alt+0**, only if the patron was found via their patron card. This is now fixed, and outgoing ILL requests are created regardless of how the patron (library) was searched.
- A correction has been made in the handling of ordered interlibrary loans so that it is now possible to save changes regardless of the status of the interlibrary loan. (IN00105923)
- ILL In: It is now possible to filter the search on organisation. Note that when an incoming ILL is cancelled/completed the pick-up branch is removed and will not be listed if the organisation filter is set to anything but **No selection**.
- ILL In: The default sort order is now set to status date, so the incoming ILLs with most recent status updates are displayed on top.
- It is now possible to print the transportation slip and return the item even if the item was sent from the ILL Out library before they noticed that the ILL in was cancelled. (SR00098163)

## RULES

- The rules for **Loan period**, **Renewal period** and **Renewal period for reserved items** can no longer have the number of days set to 0 (zero). Make sure to check your rules and remove any rules with number of days = 0. To prevent check out/renewal, the rules for **Circulation control** should be used instead.

## SYSTEM SETTINGS

- There is a new option under **Configuration/System settings** to limit the number of patron names that are presented for check-ins in the item transaction log. The default value is *-1*, which makes the system disregard this setting. If you set it to for example *2*, only the patron names for the last 2 check-ins will be presented. Due to a cache for this information, it may take a few minutes before a change has any effect.

#### SCHEDULED JOBS

- The information in the job reports for **Generate overdue reminders/warnings/bills/debt reminders/bills** is now more clear regarding how many messages have been sent for each send method. (SR00102289)

#### CONFIGURATION/ADMIN

- The **Configuration/Admin** page has been rearranged a bit for better overview.

#### RESERVATIONS

- An issue with trapped reservations that were not picked up in time caused the reservation to be trapped again when checked in in a self-service machine. (IN00102783)
- It is now possible for self-registered patrons to reserve items if the rules allow for this, even if the patron is not allowed to check items out before having been in contact with the library. The check-out rules are no longer checked when a reservation is placed. This means the patron will get a reservation notice but will not be able to check items out until the patron category is changed.

#### CALENDAR

- An issue with closure period entries not being displayed in the calendar has been fixed. (SR00106860)

#### OAI HARVESTING

- The harvesting failed when there were more than 500 manifestations belonging to expressions without RDA Content Type. This problem should now be handled. (IN00108715)

#### ARENA

- It is now possible for the end users to unselect default pick-up branch.
- There is now a possibility to sign in to Arena using the Swedish BankID if Arena is set up to use this sign-in option and the BankID-module is enabled in Quira. Please contact Axiell support if you want to start using BankID.
- It is now possible to choose communication language when the patron is using Self-registration.
- It is now possible to show language information in the record details information (IN00108431)

## Version 1.7.6.2

Release date: August 30, 2021

For some new pieces of functionality in this release, a few texts in the user interface may be displayed in English even when another language is selected.

#### CIRCULATION

- Check-in: Options in the context menu for scanned items has been improved in Norwegian to better distinguish between a return of an incoming ILL and a remote check-in of an item not known to the system. (IN00102871)

## PATRONS

- When searching for patrons, it is now possible to truncate/mask phone numbers and e-mail addresses with \* or ?. Phone numbers must be entered without any spaces and if truncation is not used, the full number including country code must be entered.
- Existing notifications no longer prevent deletion of patrons.

## ROLES AND PERMISSIONS

- For users that have not been granted permission to edit, the pen indicating edit mode is no longer visible.

## SELF-SERVICE

- It is now possible for staff to allow/recall patrons access to self-service library per branch. Only branches marked as self-service branches can be selected. Please add a support ticket if new branches should be opened up as self-service branches for you.

## USER INTERFACE

- Accessibility improvements have been made both to support screen readers and to emphasize current focus in Quria. The current field is now highlighted with a blue border that makes it easier to follow focus when navigating using the tab-keys. Checkboxes can be ticked using the space bar.

## RESERVATIONS

- When a patron has created a reservation, the queue number is now displayed in translated format. (IN00081797)
- Reservation cooperation now disregards items with status and moves on to the following levels if there are no reservable items on the current level.
- An update of valid from date on reservations either by staff or by the patron now updates the shelf list accordingly. (IN00083706)
- Trapped items are no longer affected by reservation rules when the items are checked out to avoid problems if the rules have been changed. (IN00102327)

## ILL

- For Norwegian customers: Quria now validates the to-agency ISIL in received NCIP requests against ISILs configured on branch level in organisation settings. This means that requests that are presumably sent to the wrong ISIL/library will now be rejected. It is recommended to check that all ISILs used by the library and branches are configured at branch level in the organisation settings.
- Incoming ILL: You now have the possibility to change the ILL due date before check-out and/or renewal if incoming ILL:s. For manual incoming ILL:s, the ILL due date is used for checkout/renewal unless the ILL due date is already passed. If so, a due date will be set based on the library's ordinary rules.

## ACQUISITIONS

- Working with orders: The checkboxes in front of the order items are no longer automatically cleared after making an action, to prevent the need to recheck them.
- If items on bills are deleted, information about the items is still available under **Items in the bill**.
- If ordered items were assigned barcodes via **Edit item** instead of via **Acquisitions**, the items risked being deleted when used in circulation, if the orders were cancelled later on (since the items were already received). This is now prevented. (IN00103292)

## COLLECTIONS

- The concept of **Current location** is introduced for items. The current location is always set to the item's home location, unless there is a temporary location set. This affects e.g. the holding information in Arena, shelf list, trapping of reservations and holding filters in **Collections**. Bulk search of items has been extended with search for current location.
- Collections/items: It is now possible to modify the expiry date for temporary locations. It is no longer possible to scan incoming ILL:s, items that belong to another account or to find items without barcode using a blank. (SR00102166)
- Major work has been done to secure the handling rights of items across the accounts. You are only allowed to add/edit/delete items belonging to your own account, and handling of temporary location across account borders is only allowed for items with status **Available** or **In transit**.

## INTEGRATIONS

- A new SRU source has been added to extended search: BNF. Please add a support ticket if this source should be made available for you.

## CONFIGURATION

- It is now possible to use the variable `{{PatronCard}}` in addition to the existing variable `{{PatronIdentifier}}` that prints the patron ID in all message texts that refers to patron notifications. The first found active card is printed.
- German customers: The scheduled job **Import MARC records from Onleihe** now marks the job as failed if something goes wrong.

## NOTIFICATIONS

- An issue with the &-character in SMS messages has been fixed. (IN00103117)
- When closing a loan, outstanding history of overdue reminders under **Notifications** are now deleted.

## METADATA

- Online periodicals now get media type **ePeriodical** and work type **Words** when MARC records for online periodicals are imported.

## Version 1.7.5.2

Release date: June 28, 2021

For some new pieces of functionality in this release, a few texts in the user interface may be displayed in English even when another language is selected.

## CIRCULATION

- If you search for a blocked patron in the checkout window or in the reservation wizard, a yellow banner will alert you about this.
- Route and bus stop for the mobile library is now saved correctly for patrons.
- It is now possible to scan a patron card via RFID in the **Check out, Create reservation and Add manual ILL In** dialogs. (IN00095123)
- Using RFID in **Collection/Items** to scan specific items is now possible and does not fetch all items without barcodes. (IN00095939)
- Renewals: An extra check is added in renewal to check the reservation cooperation for existing reservations when calculating if there is a queue. This is to avoid an unnecessary need to force the renewal because of reservations that are outside the cooperation setup. (IN00095617)

## NOTIFICATIONS

- In the patron details you now find a Notifications tab where all still valid notifications to the specific patron are listed. If a notification is expanded, you can see the original message. You can also resend or reprint a message, and the message is recreated based on the current version of the message text template. If resending via SMS or email is not successful, a printout will be generated. Note that direct messages and age group transition messages can only be resent using their original send method.

Notifications that are no longer valid, such as overdue reminders for items that have been checked in or reservation notifications for reserved items that are picked up, are not listed. Notifications such as age group transition e-mails and direct e-mails must be deleted manually to disappear from the list.

- Note 1: The original message for notifications sent prior to this release is not presented, and any direct messages and age group transition email messages sent before the release are not presented.
- Note 2: The **Resend** option will only be enabled if the patron has a valid active email address or SMS number and the notification rule that generated the notification allows email or SMS (at the time the notification was generated).
- It is possible to determine if overdue warnings should be sent via SMS/email or not.
- Addressing bills to guarantor: a new setting is added to be able to choose if bills should be addressed to the guarantor of a child or not. This setting needs to be checked so that is set correctly. The setting applies to the following rules:
  - Circulation control/Enable overdue reminder/Level Bill
  - Circulation control/Enable debt reminder/Level Bill
- Extra validation is added to patron email addresses to prevent typing errors.
- When the variable {{PatronIdentifier}} is used in message texts, it is now the external ID that is printed, not the patron card number. The external ID is searchable in search patrons just as the patron cards are. (SR00087462)
- The font sizes for table contents in patron messages are now correct in relation to the set size in the message text. (SR00087705)

## ACQUISITIONS

- When registering customer numbers for suppliers that are integrated with an order service, an error message is displayed if something goes wrong or if the customer number cannot be registered in the order service from Quria.
- If order messages that are imported from suppliers lack info about planned delivery, the default delivery date will be set, provided that this has been registered in Quria.

## ANALYTICS

- To make the use of analytics more consistent, the use of short name in the analytic events for debts has been changed to code. If the short name for a branch has been changed along the way, it will not be changed back to branch code after the upgrade but will still be shown as short name.
- Some analytics data, such as patron categories, organisations, departments and item types, is customer specific. The data is stored as it was when the analytic transaction was stored, to always be able to present data even if the original data source is deleted, for example if a patron category is deleted. The data is then grouped on the distinct values. If the original value is modified, you will get variants in the analytics data. To minimize the risk for unnecessary changes that will make analytics harder to follow, warnings will be displayed in the user interface for the data that is used in analytics.
- It is possible to group data on weekday/weekday-hour in analytics, to make it easier to find out at what times the library is more heavily used.
- It is possible to group data on item account, item authority or item branch for all for all analytical calculations that include items, including filtering on input values for item account, item authority or item branch.
- System data like expression language and manifestation literary form/target audience/manifestation type is presented with translations instead of codes in analytics.
- RDA values are presented with translations instead of the original RDA codes in analytics.
- Patron data, such as patron category and age, is added to analytics for notifications.
- Grouping on age group also aggregates data for analytic events without patron age.
- Analytics for ILL In include information about the ILL supplier and country and you can group and filter on both values. This only applies for new transactions made after the release - no retroactive updates.
- Since remote check-in is a function not in use in most countries, the two variables related to this are now only used in data source **Remote check-in** and no longer in **Circulation** to avoid confusion.

## PATRONS

- It is possible to export the complete user data for a patron to a file according to GDPR requirements. This functionality requires a special permission: **Download patron data**. Learn more in the online help: [Bibliothekskundendaten herunterladen und Bibliothekskunden bearbeiten, sperren oder löschen](#)
- There is support for quick search of the latest 10 patrons that have been searched for, and also a hotkey (Alt+0) to quickly bring up the very latest patron. Learn more in the online help: [Bibliothekskunden suchen](#)

## ROLES AND PERMISSIONS

- A new option to control who may delete items by searching the collection has been introduced with the **Bulk handling** permission **Items: Handle searched items (not only scanned)**.

## INTEGRATIONS

- Some settings for Metadata Update Service under **Integration settings** on the **Configuration** page have been removed.
- Some settings for BaseBibliotek under **Integration settings** on the **Configuration** page have been removed.
- BaseBibliotek: Changes to the library details should be done by signing in to this page: [www.nb.no/basebibliotek/](http://www.nb.no/basebibliotek/) using your BaseBibliotek library number and corresponding password.
- Both the patron and ILL supplier should be updated with the information from BaseBibliotek regardless of any local changes. Any local changes will be overwritten when downloading from BaseBibliotek.
- New SRU sources are added to extended search: SLSP. Please add a support ticket if any of these sources should be made available for you.

## SELF-SERVICE

- Under **Local device configuration** on the **Configuration** page it is now possible to set if strict XML should be used in the SIP2 communication. Please contact your self-service supplier if you need information about what your specific self-service equipment requires. Note that because of caching it can take up to an hour before checking/unchecking the box has an effect. (IN00083572) Learn more in the online help: **Konfiguration von Peripheriegeräten und Integration**
- The self-service functionality is enabled per branch. Contact your sales representative if you need to open up a new branch for self-service.

## USER ACCOUNTS

- When signing out from Quria, the user will be signed out from all active sessions on different browser tabs using the same single sign-on (SSO). When signing back in to Quria, you have to select the user and enter the password again. (IN00089852)

## ARENA

- Mapping of media class between Quria and Arena has been fixed for the media types of Videodiscs and AudioBook mp3.
- The number of remaining renewals for a specific loan is now correctly displayed.
- Renewal of loans: active e-loans do no longer prevent renewal of other items if marked for renewal. (IN00098183)

## USER INTERFACE

- Dates in Slovak date format are now working as expected. (IN00097269)

## RESERVATIONS

- The rule **Item reservable** is now checked when checking in items as well as when the reservations are created to avoid trapping of items that should actually not be trapped due to this rule. (IN00094980)
- An extra check is added in renewal to check the reservation cooperation for existing reservations when calculating if there is a queue. This is to avoid an unnecessary need to force the renewal because of reservations that are outside the cooperation setup. (IN00095617)
- A new rule is available: **Maximum number of reservations per title**. (SR00077153)

#### ILL

- All ILL suppliers will be updated after the release (Norway and Sweden) to get postal address set if box address is missing. (IN00094010)
- Some specific ILL Ins did not get the correct main status (**Requested**) and could therefore not be received. This is now secured.
- **Register arrival** now scans the item correctly. **Register arrival manually** (if using EasyCheck RFID provider) now scans the patron card.

#### COLLECTIONS

- The work page has been modified to give more information about each manifestation: The information about series, target audience and literary form is moved to the list of manifestations. To save space, the **View further details**-button has been removed, and instead, you can click anywhere on the row to open up the manifestation details. You still get separate information about the series for the listed manifestations under **About the work** to be able to open up full series information. This also applies to periodicals that do not have the series information in the list of issues.
- The year information for manifestations on the work page is now presented based on:
  1. The first publication information with organizer/agent=**Publication**
  2. The first publication information with any other organizer/agent type if **Publication** is missing. (SR00093958)

#### SCHEDULED JOBS

- Scheduled jobs are now marked as aborted if interrupted by a redeploy.

## Version 1.7.4.3

Release date: May 10, 2021

For some new pieces of functionality in this release, a few texts in the user interface may be displayed in English even when another language is selected.

#### CIRCULATION

New workflows: The **Scan items** window has been replaced by separate windows for **Check out**, **Check in** and **Renew**. The new workflows have been developed in close collaboration with existing customers in different countries and entail a better user experience and improved performance.

Even if force is needed all scanned items can be handled by a single click or by pressing **Enter**. An extra dialog is presented that offers the possibility to only handle items that do not need force or to handle all scanned items.

Today's date is used for return of items by default, but it is also possible to enter an earlier date for retroactive return for all scanned items.

In **Check out** and **Renew**: The default due date is used unless otherwise stated, either for a single item or for all scanned items.

When loans are renewed from the patron details, the renewal window is opened, where the items that have been chosen for renewal in the patron's list of ongoing loans are listed.

Learn more in the online help: [Medien ausleihen](#), [Medien verlängern](#), and [Medien rückbuchen](#)

- The item transaction log has been extended with the patron's name as a clickable link and the complete username is presented.
- Due dates can be extended in bulk on the **Patron/Loans** page. Learn more in the online help: [Nach Ausleihen suchen](#)

#### TITLES IN DEMAND

New functionality: The **Titles in demand** feature provides information about the relation between reservations and holdings and gives an indication about demanded titles. For performance reasons, the data is prepared daily. Learn more in the online help: [Nachgefragte Titel](#)

#### AUDIT TRAIL

New functionality: The **Audit trail** functionality is available for many entities in Quria and is accessed via a new icon (a small clock with an arrow) in the dialog headers.

The audit trail opens up in a new tab and gives information about who added or modified data, when it happened and what type of data it is. A permission must be activated for the roles that should be able to use this functionality.

**Notes:**

The actions and property names are only presented in English.

Automatic updates of data triggered by system functions will also be listed.

Currently, a maximum of 1000 events can be searched for a specific entity. The most recent events will be listed.

Learn more in the online help: [Protokollieren von Benutzeraktivitäten](#)

## MOBILE UNITS (BOOK BUS)

New functionality: Routes and stops are now supported to simplify handling of reserved material that should be picked up in mobile units such as book buses. Patrons can be connected to routes and stops, and information about routes and stops can be included on reservation notices. Routes and stops are also included in reservation bulk handling and patron bulk handling.

Learn more in the online help: [Mobile Bibliothek](#)

Please contact Axiell if you want to use this functionality.

## ACQUISITIONS

- Orders received automatically from suppliers will be marked with **Set as new title** to support news lists in Arena. When the very first item is received, the manifestation will get the current date set as **Accession date**.
- If you change department/section under **Location and type**, the shelf is no longer emptied.
- The distributor FörlagEtt is now possible to use with eHUB.
- When generating barcodes, if no mask is defined under **Configuration/Item numbers**, the possibility to let Quriadecide is hidden.

## ARENA

- The performance for listing a patron loans and reservations, and for periodicals with many issues, has been improved.
- The correct due date is now shown when a renewal is not possible.

## E-MEDIA

- An option to terminate loans of e-books that are locked in relation to the supplier's system has been introduced in the borrower's list of current e-loans.

## METADATA

- Authority control for persons either via DNB (Deutsche Nationalbibliothek) or from BIBSYS in Norway is now supported. Please contact Axiell if you want to use this functionality.
- Family name is no longer mandatory when editing a work.
- The handling of publication events in manifestations is changed due to performance reasons and to customer requests. The publication events are no longer shared by multiple manifestations and there is no longer a risk that other manifestations will be changed when a publication event for a specific manifestation is updated. Publication event term is now called **Publication information**.

## BILLS

- Bills can now be closed. A status can be set for the items on the bill that is closed. Any item on a closed bill will become available again.

## ILL

- Renewal of ILL In via NNCIP is now more resilient towards specific/wrong handling of requests by the lending library. This might lead to renewals that was not really accepted by the lending library, but since the response was wrong, the renewals will go through to give the patrons best possible support. The full history can be seen in the ILL In details.
- Biblioteksök in Norway: ISIL can now be set on account level to return all items for the whole account. Likewise, if only items for the authority should be returned, the ISIL should be configured on authority level. However, most customers would want to configure ISIL on branch level. This is especially important for Norwegian libraries, where the ISIL should match the physical library unit and thus have its own ISIL configured on branch level. Please contact Axiell for questions about your ISIL configuration.
- The available actions for incoming ILL:s have been modified, to, for example, ensure that you can always edit an incoming ILL In regardless of status, or that it is not possible to cancel an incoming ILL that has been received. If you encounter an incoming ILL that cannot be completed, please register a support ticket and Axiell will assist you.
- The status filtering for incoming ILL:s has been changed in order to make it easier to find relevant items. The following statuses are now available when filtering incoming ILL:s: **Requested, Received, Cancelled** and **Completed**. The previous status **Checked in** will no longer be set - the incoming ILL:s will get status **In transit** or **On reservation shelf** instead. Existing ILL:s with status **Checked in** are not modified, but their status will disappear when the ILL is further handled.
- Libris ILLs can now be imported.
- When receiving an incoming ILL, it is possible to change ILL supplier and change pickup branch. Both ILL supplier and pickup branch is mandatory.
- It is now possible to receive copies in ILL in. A temporary barcode must be entered to facilitate a reservation notice when a check-in is done, but it will be automatically released for reuse when the incoming ILL is completed. That is done automatically when last pick-up date is reached or if the reservation is cancelled.

## INTEGRATIONS

- There are now two different sources for suppliers for ILL: Libris (Sweden) and BaseBibliotek (Norway). Norwegian libraries should after upgrade set their username/password for BaseBibliotek in the new integration setting "BaseBibliotek". It can only be set on account level and it is only necessary to set it for the account(s) that actually needs the library download from BaseBibliotek. Learn more in the online help: **Integrationseinstellungen**  
Please contact Axiell if you want to use this functionality.
- If your library is connected to Libris, it is now possible to delete 'Holding' information in Libris automatically when deleting the last item for a specific sigel from Quria.

## SELF-SERVICE

- An error regarding the timestamp when a patron uses the self-service library has been corrected.
- Local devices can now be configured to allow patron access without PIN code. This can be useful if you have self-check or self-service systems where you don't require that patrons use a PIN code.
- It is now possible for Axiell staff to configure the SIP2toHTTPS-proxy to use a unique default username/password per port.

## PATRONS

- When searching for inactive patrons, the date the patron was created will be used if the patron has never been active.
- There has been made improvements when deleting email addresses.
- Patron memberships and their expiry dates are now possible to search for using the patron bulk functionality.
- Searching in patron loan history now finds all titles.
- It is now possible to sort on all the columns except **Note** in **Patron/Reservations**.

## RESERVATIONS

- If a patron checks out an item for a title for which the patron has a non-trapped reservation (if this item has not been trapped for the patron), the reservation will be automatically completed.
- When reserved items are checked in via self-service, they will now get trapped with status **Trapped in transit**. This means these items will no longer show up in the shelf list and other patrons will not be able to check them out.

**Note:**

The item needs to get checked in by staff before the patron will get a reservation notice.

- On reservation slips, the trap number is now enlarged to be more visible, and some extra blank lines added to make the slips a bit longer.
- For bulk handling if reservations, sorting in columns is now possible.
- When a reservation is made with the type trap first for two or more titles, it is now the trapped title that is presented with trap number in the patron's reservation list in Arena.
- It is now shown in the patron reservation list if a reservation is of the type of item or trap first.
- The most reserved titles are now displayed in the start page as a clickable link: Creator - Title.
- There are now 3 possible scopes when deciding which items to use for reservations:
  1. **Use cooperation levels:** The default scope for reservations that will be used when placing reservations via Arena.
  2. **Override cooperation levels:** This is the same as the current **Override cooperation levels**, except there are some changes in the code (the attribute used in the reservation record has changed).
  3. **Trap at any branch:** Any item within the reservation account will trap for the reservation.

Note that, regardless of scope, if a reservation control rule does not allow an item to leave the home branch or home authority, then this will still overrule even **Trap at any branch**. The choice of reservation scope is available both when a reservation is placed and when editing a reservation.

#### ANALYTICS

- The section filter in top lists can present more than 100 sections.

#### SEARCH

- Free-text searches now handles searches on diacritical characters and country-specific characters in a standardized way according to needs in different countries. This applies to all free-text searching, such as patrons and collections.
- It is possible to search for classifications in various ways. For example, truncate classifications and search for single words in the classification: Swedish examples: Lz, Lz Nordström, nordström, lz.
- A new SRU, Melinda (Finland), is added to extended search. Please add a support ticket if you want to use this functionality.

#### USER INTERFACE

- Hotkeys have been introduced for common functions. Learn more in the online help: [Quria-Hotkeys](#)
- The title header in manifestation details has been modified to handle very long title information. It is a better user experience and does no longer interfere with the tabs.

#### ONLINE HELP

- The online help is now also available in French: [help.quria.axiell.com/fr\\_FR/Content/Home.htm](http://help.quria.axiell.com/fr_FR/Content/Home.htm)

## Version 1.7.3.6.3

Release date: March 26, 2021

#### COLLECTIONS

- The handling of publication events in manifestations is changed due to performance reasons and to customer requests. The publication events are no longer shared by multiple manifestations and there is no longer a risk that other manifestations will be changed when a publication event for a specific manifestation is updated.

#### ACQUISITIONS

- Orders received automatically from suppliers will be marked with **Set as new title** to support news lists in Arena. When the very first item is received, the manifestation will get the current date set as **Accession date**.

## Version 1.7.3.6

Release date: February 22, 2021

For some new pieces of functionality in this release, a few texts in the user interface may be displayed in English even when another language is selected.

#### MAINTAINABILITY

- When a new version of Quria is available, a message that asks the user to refresh the page is displayed. Once the user clicks **Update**, the new functions and fixes will be loaded immediately.

## BILLS

- Billing via Visma is now supported. There are integration settings needed for billing via Visma. Learn more in the online help: **Visma**  
This includes a new job, **Fetch invoice updates for bills**, which will check for bills that have been successfully sent to Visma and get the latest invoice information. If an invoice number has been created in Visma, this will be stored on the bill and can be seen under **Debts and payments/Bills** for the patron, and if the invoice status has changed, this will be logged. Another job, **Fetch invoice payments for bills**, will look for outstanding bills that have a Visma invoice number and checks to see if they have been marked as paid. If an invoice has been paid, it will be noted as **External payment**.  
**Note:** These scheduled jobs should not be activated to run automatically:  
The **Fetch invoice updates for bills** job can be scheduled to run automatically only when the testing has been completed.  
The **Fetch invoice payments for bills** job should be run manually at this point.
- Payment history in Arena now displays correctly after payment in Arena.
- Bills paid in Arena after upgrade to this version of Quria, will be categorized as **Online in Analytics**.
- Configuration of billing via Agresso is now completely made in Quria and not in Skynet as before.
- The setting **Include overdue fees on bills** is now only set at authority level, which means that you need to check that this setting is made properly.
- A new setting, **Number of payment days**, can be made on authority level to enable printing of last payment date on bills. The variable `{{LastPaymentDate}}` needs to be included in the message text for print-out of bills.
- Only bills that have not been sent via integration will be generated as print-outs.
- Existing overdue fees are now included on the receipt when a bill is settled.
- Bills can now be closed. A status can be set for the items on the bill that is closed. Any items on a closed bill will become available again.

## ACQUISITIONS

- An issue with missing department information on orders from Adlibris has been fixed (IN00079031)
- It is possible to include the order number on print-outs and email messages for manually created orders by including the `{{OrderNumber}}` variable.
- Kulturfond items (Norway) now automatically get an item receipt type KF instead of item type.

## RESERVATIONS

- New functionality: Many reservations can be selected and handled at once - the selected reservations can be cancelled, modified or exported to Excel.  
Learn more in the online help: [Gleichzeitiges Verwalten von vielen Reservierungen](#)
- In a number of places related to reservations, you can click the patron name to open the patron details.

## COLLECTIONS

- Authorized person entities in collection metadata are now automatically updated. This only applies to authority records from DNB for the time being.
- It is now possible to search on barcodes under **Collections/Items**. List boxes allow multiple selections.
- New SRU sources are added to extended search: Library of Congress, Nasjonalbiblioteket, BIBBI Nynorsk and WorldCat. Please add a support ticket if any of these should be made available for you.
- When adding an item using a scanner, a click is no longer necessary. A button has been added to create an individual item without barcode. It is also possible to add a sequence of items based on a barcode that includes alphanumeric characters.
- Several improvements have been made for the shelf list:
  - Sorting of the columns is added, and default sorting is changed to be on **Department/Section/Shelf**.
  - The shelf list is more responsive to support using small screens - the content of the previous description column is appended to the title column, and the only column that will be hidden is the media type column.
  - You can open the work by clicking its title.
  - It is now possible to expand the item information to, for example, set an item status if needed. However, there is a known issue that this does not always work.
  - Items trapped but where the reservations are cancelled, are now presented on the shelf list where the item is trapped, not on owning branch.

## PATRONS

- Print-outs: It is now possible to select authority in the organisation drop-down and get a list of all print-outs for a selected authority.
- The guarantor functionality now works as expected when adding a patron: Both the possibility to connect the new patron to a guarantor or to just add a guarantor name are now present for patrons of age group marked with **Guarantor**. If the rule **Patron control/Guarantor required** is set, it is mandatory to set one of the guarantor options.
- The external ID for patrons (an ID that Quria automatically creates) is now searchable using freetext search and with prefixes **eid** and **externalid**. The ID can be found under **General information** on the **Patron data** tab, if needed.
- Improved handling of national identity numbers.
- Custom field drop-down lists can now present more than 100 values.
- Paging of patron loan history now works correctly.

## EVENTS

- Many improvements have been made to event handling regarding stability and performance, including an improved user experience when modifying recurring events.
- It is now possible to add information about actual attendees after an event.
- If a library visitor registers online to the same event with the same email address more than once, the previous registration will be deleted.

## CIRCULATION

- When scanning an item, the barcode is displayed and information about if the item belongs to a different branch.
- New function: It is now possible to close a loan without checking it in. This is useful if the item is gone but you want to release the patron from the loan without checking in the item. This can be done both from the list of loans in the patron information and from the **Loans** tab of the **Patron** section.
- Different texts are now used for check-out/renewal receipts and reservations slips regarding **Due date** and **Valid to**.
- It is now possible to determine a default value regarding printing for all receipt types (except reservations slips) used in **Scan items**. The default values are set under **Configuration/Workplaces**.
- Arrival registration of incoming ILL In items now truncate the barcodes according to system setup.

## PERIODICALS

- A safety check is added to prevent users from adding publication patterns with more than 366 issues for a year.

## INTERLIBRARY LOANS

- Reservation fees are now created for ILL Ins according to rule setup.
- Reservation notifications regarding ILL Ins now specifically say it is a reservation for an interlibrary loan.
- It is now possible to delete incoming ILLs with status **Returned to ILL supplier**. Incoming ILLs with status **Returned to ILL supplier** will be found under completed ILLs and not under open ILLs.
- NCIP LookupItemSet from Bibliotekssök now checks organisation in Quria based on ISIL-numbers on all organisational levels including branch level.

## USER INTERFACE

- Finnish is now available in the Quria user interface.
- When adding items, the user interface is more compact to make it possible to see all relevant information without scrolling.
- Patron facing texts (in Arena and in messages sent from Quria) are now translated to Nynorsk as well.

## ARENA

- When using Arena with Quria as backend system, loan history sorting works as expected when having signed into Arena.
- Titles with only unallocated orders no longer prevent My reservations to be shown in Arena or the queue information under Reservation details in Quria.
- Title information in records exported from Quria to Arena now shows part title and part number in search results and catalogue record details.
- The original title is now searchable in Arena.
- Publisher, original title and target audience are now possible to display in Arena's catalogue record details.

## Version 1.7.2.6.6

Release date: December 8, 2020

### PERIODICALS

- The year end processes now also include a process for periodicals. Learn more in the online help: [Jahresendprozess](#)

## Version 1.7.2.6

Release date: November 23, 2020

For some new pieces of functionality in this release, a few texts in the user interface may be displayed in English even when another language is selected.

### RESERVATION COOPERATION

It is possible to cooperate around reservations within an organisation to, for example, avoid unnecessary transportation. Reservation cooperation is configured per pick-up branch. It is also possible to define that for example certain item types are to be excluded from the reservation cooperation. If a branch has not configured levels for reservation cooperation, then all items regardless of home branch are eligible for trapping. A new permission allows for overriding levels in the reservation cooperation.

**Note:** Reservation cooperation updates will fully affect the shelf list the following day. Reservation rules are superior to set-up of reservation cooperation.

Learn more in the online help: [Reservierungskooperation](#)

### RESERVATIONS

- It is now quick and easy to reserve several titles in one go using the Collections basket. You can choose if you want to trap all titles or only the first one that is checked in.
- You can change the order of the reservations in the reservation queue.
- The reservation wizard is more intuitive.
- You can define a reservation scope for the **Item reservable** rule, to allow for items to only trap reservations with pick-up branch:
  - that equals home branch, or
  - that is included in home authority, or
  - at any branch in the organisation.

**Note:** Reservation rule updates will fully affect the shelf list the following day.

### COLLECTIONS

- It is now very easy to add multiple items. For example, if you have received 30 items of the same title, you can either just scan the items one by one and click Add after each item. Alternatively, you can indicate that you want to add 30 items, and enter the first barcode. The other 29 items will get barcodes in sequence based on the given barcode.
- It is now possible to sort the item list in manifestation details.

## ORGANISATIONS

- Organisation filtering allows hiding selected departments or sections from being displayed in public portals such as Arena.

Learn more in the online help: [Verbindung zwischen Quria und externen Systemen](#)

### Notes:

For these settings to have an effect, reindexing of the public portal is required.

For Arena: Besides the configuration in Quria, organisation filters can be configured in the Arena installation if needed. This is not dependent on the Arena indexing and can be done after reindexing. This configuration can be done if you for example want to avoid search hits for material without holdings/fictive holdings.

For WeLib: Depending on organisation and branches, if there is anything that needs to be hidden or changed for new branches, or if the branch ID has been changed in Quria, then the WeLib configuration file needs to be reconfigured.

## PATRONS

- Patron categories can be marked as default student/teacher/librarian category used for automatic patron sync with a school library system, to automatically assign these categories proper permissions in the school library system. The WeLib backend configuration needs to be updated if the patron category ID in Quria is changed for the student/teacher/librarian roles.
- When adding or editing a patron, a drop-down list displays pick-up branches for all branches in the current account.

Learn more in the online help: [Bibliothekskundenkategorien](#)

## BILLS

- The total debt amount for a patron now also includes unsettled bills and affects the patron block based on debt amount.
- The scheduled jobs for generating overdue reminders and bills and generate debt reminders have be divided into four jobs:
  - Generate overdue reminders
  - Generate overdue reminder bills
  - Generate debt reminders
  - Generate debt reminder bills

The scheduling of these jobs needs to be checked under **Configuration/Admin/Manage scheduled jobs**.

- It is now possible to delete integration settings under **Configuration/Integration settings**.

## USERS

- In addition to the most common user type **Staff**, there are system users that need to be set up for self-service machines and public portals such as Arena and WeLib. User type **Public portal** must be selected in order to display holdings in the public portal.

Learn more in the online help: [Benutzer](#)

#### MANIFESTATION TYPES

- Fictive holdings can be created for manifestations without holdings in order for patrons to find these records also in filtered searches (for example via extended search) in a public portal such as Arena and WeLib. You can determine if titles of some manifestation types, such as eBooks and eAudio, should create fictive holdings in the public portal.

**Note:** For these settings to have an effect, reindexing of the public portal is required.

Learn more in the online help: [Verbindung zwischen Quria und externen Systemen](#)

#### INTEGRATIONS

- When connecting to RIFD equipment from P.V. Supa, make sure to select 7002 for RIFD equipment port.

#### METADATA

- Indexing of person entities now includes variant names. Related names are not indexed to avoid irrelevant search hits. The related names might contain names not directly indicating the person in question.
- The entity for **Places**, used in **Subject places** and **Publication events**, now shows the correct count of usage.
- Continuous import of records from Libris.
- Continuous removal of no longer available eMedia records from Libris.

#### ARENA

- Overdue loans are now shown correctly under **My loans** in Arena.
- Export of periodicals to Arena is modified in order to be able to filter on branch/department.
- The **Reserve** button is now active for patrons with settled bills.

#### ANALYTICS

- This release includes an update of unit counts for items. Since there has been an error that caused some data to lack item ID, all items will get the current state in unit counts to get a correct baseline. Any statistics based on unit counts of items from a date earlier than this release, entails a risk of incorrect information.

#### ILL

- Migration issue: duplicate ILL patrons were created. Fix to avoid this in coming migrations and to update existing data.
- ILL In items could in some cases not be renewed. This is now working.

## Version 1.7.1.6

Release date: September 22, 2020

For some new pieces of functionality in this release, a few texts in the user interface may be displayed in English even when another language is selected.

## COLLECTIONS

- Searches can be refined by expanding the **Refine search** tool, located just below the search field.
- The most recent catalogue searches are automatically saved.
- Users can save their favourite searches for future use.
- Use of parentheses in search queries is supported.
- It is possible to scroll the list of entities and you get information of how many connections each entity has.
- An issue with registering magazine/newspaper issues has been solved. (IN00061710)
- An issue with an item that could not be deleted has been fixed. (IN00061971)
- An issue with exporting a list of items to Excel, and the due date column contained incorrect information, has been fixed.

## EVENTS

- Searches can be refined by expanding the **Refine search** tool, located just below the search field.
- A maximum number of participants that can be signed up in one event registration can be defined.
- All-day events can be selected.
- Events can be copied.
- The **Create event** user interface has been improved for a more intuitive user experience.
- An issue with not being able to add an image to an event has been fixed. (IN00060424)

## METADATA

- Persons (creators) can be authorised towards a supported source to increase metadata quality. The source is configured at the time of installation of Quria. Currently only GND in Germany is supported.
- Genres are included in the scheduled job that removes unused metadata entities. (SR00050749)

## CIRCULATION

- Remote check-in is supported for Norwegian installations.
- The patron name for a trapped reservation is clickable when the item is expanded in **Scan items**. (IN00051184)
- An issue with sometimes not being able to check in items has been solved. (IN00061208 / IN00060108)

## PATRONS

- Patron phone numbers have been standardized to ensure compatibility with different SMS providers. Patron phone numbers need to be entered in international standard format *+CountrycodePhonenumber*, e.g. +46123123456. It is possible to enter separators to enhance readability, e.g. +46 123 123456 or +46-123-123456. Current patron phone numbers are converted to adhere to the new format, but there might be some that could not be handled. You will receive a list with those patrons so that you can check them manually.
- An issue with blocking/unblocking library cards has been solved. (IN00061210 / IN00061298)

#### USER INTERFACE

- Support for Czech and Slovak

#### INTEGRATIONS

- RFID integration for P.V. Supa is supported.

#### ARENA

- Expiry date of library membership is visible in **My account**. (CH00043676)
- Inactive (coming) reservations are shown. (IN00054242)
- The format of items is displayed for catalogue records. (SR00052326)

#### SELF-SERVICE MACHINES

- Self-service machines can handle special characters such as “ü”. (IN00058469)
- An issue with the timestamp in Quria item transaction log has been solved. (IN00061219)

#### ACQUISITIONS

- Several improvements have been implemented for a better user experience.
- When orders are imported automatically, and if no department, branch or supplier is specified, the import will be based on the account information. (IN00060787)

#### ANALYTICS

- A new data group, *Owning branch*, has been added for **Debts** reports. You can use this to get information about the amount of debts/payments and to whom it belongs.  
Example: an overdue fee belongs to the branch where the loan was issued, but it is created where the item was returned. When you choose organisation under **Data selection**, you will get information about where debts/payments are created.

#### ARTICLES FOR SALE

- When a patron buys a sales article with direct payment, the payment is added to the patron's payment history. (SR00057541)

## Version 1.7.0.4

Release date: June 29, 2020

#### ACQUISITIONS

The Acquisitions functionality has been reworked and improved. Examples of new and updated functionality:

- Support for budget periods and follow-up.
- Requisitions allow anyone in the organisation (with permission) to indicate items that they wish to order.
- You can create personal requisition templates to minimize the work of creating requisitions.
- Users with permission to create orders can proceed to actually order the requested items.
- Orders can be printed or sent via email.
- When receiving items, you can add barcodes by scanning, or get automatically created barcodes based on a specific initial value (useful if you have ordered many copies and want to add a sequence of barcodes) or by letting Quria continue the system sequence.
- Any unfinished requisitions and orders can be transferred from the current year to the next using the year end process.
- New settings:
  - You can register different addresses for deliveries and for billing
  - Budgets and budget periods
  - Currencies
  - VAT rates

Learn more in the online help: [Erwerbung](#)

#### CIRCULATION

- Home service is supported to allow citizens that cannot visit the library to make use of the library's services. It includes saving loan history and warnings when reserving or checking out a title that the patron has already borrowed.

Learn more in the online help: [Heimservice](#)

- Filtered search of items related to loan information: organisation where the items were checked out, intervals of loan dates and due dates, patron categories and school/class information for installations with school branches. The results can be exported to PDF or CSV. This functionality is found on the **Loans** tab under **Patron** in the main menu.
- It is possible to check out or renew an item even if the item has been requested by another library (using ILL).

#### COLLECTIONS

- New module: Image archive and document repository. The module allows for adding images and PDF documents to the manifestations and these are then available in Arena and in the work page in Quria. Please contact your account manager if this could be useful in your library.
- Series and Contributors are now entities that allows for auto-updates.
- The external search now remembers that last used source per user.
- The dropdown list for selection of notes is sorted alphabetically regardless of language used.
- It is possible to add classifications that include spaces.
- It is possible to add subjects that include special characters.
- The Genres entity for works is no longer case sensitive.

- The barcode is included when using bulk handling of items and downloading the result as CSV.
- An issue with erroneous subjects being created when importing Antolin records has been fixed.

## INTEGRATIONS

- Improved user interface for integration settings to make it easier to understand which parameters that are needed. The required information must be received from the integration party.
- Settings for Agresso can only be added on account or authority level, and the Agresso Bill Number setting will be used for generating bill numbers in a series defined by Agresso.

## ADDRESS HANDLING

- American address format is supported for installations with en\_us locale. This includes adding addresses in Quria and presenting address information in Quria and on print-outs from the system, for example overdue reminders and reservation notices.
- New module: Automatic address autocompletion using Google Places. This new module offers easy registration of addresses in Quria. As you start typing, matching addresses will be presented. You just choose the correct one to get all fields filled in. Please contact your account manager if this could be useful in your library.

## ANALYTICS

- Unit counts can now handle modifications of data and you can search how many items, patrons and manifestations you had at any time since the start in Quria based on the values at the selected time. Example: You add an item January 1 with Department=A. You then modify the item February 1 and set Department=B. This specific item will be included in the count for department A until January 31, after that as department B.
- You can also group and filter the data on different values depending on the data source, the same way as in Occasions count.

## ARENA

- Any existing cover URL:s are exported to Arena to use as fallback if the generic cover service fails in finding covers based on ISBN.
- The availability status Internet accessible is now only dependant on an e-manifestation type.
- When an event is cancelled, its original image is displayed in Arena.
- Reservations are now blocked in Arena, if rules have been configured to prevent reservation of titles with items available on the shelf.

## RESERVATIONS

- Items that are not possible to reserve are not displayed on the shelf list.

## PATRON MEMBERSHIP

- Patron memberships that inherit due date from a main contact can only be renewed for the main contact.

# Version 1.6.7.2

Release date: April 16, 2020

## CIRCULATION

- You can still check out items even if Quria is offline (if the connection to the internet fails for some reason).  
Learn more in the online help: [Quria offline verwenden](#)
- If the RFID tag alarm status does not correspond to the item status in the Quria database, you will get a notification. It is also possible to reset the alarm status if needed.  
Learn more in the online help: [RFID-Konfiguration](#)

## ACCOUNTS

- In addition to using Google accounts for signing in to Quria, Azure SSO is also supported. The Azure users first need to be added in Quria. If you are signed in to Quria using a Google account when this release is deployed, you may need to clear your browser cache.  
Learn more in the online help: [An- und Abmelden](#)

## COLLECTIONS

- When searching in Collections, it is possible to filter to show only titles with holdings at a particular part of the organisation.
- The characters < or > in subjects are no longer treated as html code in the facets.

## IMPORT OF MARC RECORDS

- No default target audience will be set if the MARC-records lack information.

## PATRON MESSAGES

- The notifications sent for overdue reminders and overdue reminder for reserved item have been improved. Also, if the overdue fee is 0, the overdue fee column on the notification will be suppressed.

## RESERVATIONS

- Reservation of periodicals includes information about title/issue in the patron details.
- All reservations are visible in the self-service machine.

## INTEGRATIONS

- The patron's age group is included in the patron authentication response to Filmfriend.
- Norwegian SRU-sources are now included in Quria's SRU search. Please contact Axiell support when you want access to SRU search.

## ARENA

- Item status Reference is used consistently in catalogue record information and search results.

## ALMA

- Manifestation type eMusic is mapped correctly.

## RFID

- EasyCheck RFID equipment is also supported.

# Version 1.6.6.2

Release date: March 23, 2020

## SEARCH

- The fuzzy search (in for example collections, patrons and events) has been adjusted to reduce the number of similar hits in the search results. Please contact Axiell if you think that the adjusted search is not satisfactory.

## EVENTS

- Locations and rooms for events are added under **Configuration/Events**. These locations and rooms can be selected when creating new events. Existing events need to be updated with new information about location/room IF the event is modified. If no modification is made, the current information will remain.

## ANALYTICS

- Reports limited to manifestation/item shelves that begin with specified characters can be created.

## CIRCULATION

- An issue with the calendar not being checked when forcing a checkout/renewal has been fixed.

## COLLECTIONS

- External sources (DNB, Helveticat and Libris) are available from **Collections**. Access to the **External sources** tab is controlled via permissions.
- It is possible to search for genre in **Collections**.

## ADMINISTRATION

- The user interface for scheduled jobs has been improved:
  - It is possible to run jobs also monthly and yearly
  - It is possible to run weekly jobs on several weekdays
  - It is possible to filter the executed jobs log on job name
- A new scheduled job, **Discard unused metadata**, has been added. Running this job improves lists with creators, subjects and classifications in add/edit metadata by removing unused entities.
- All **Settings** pages can now present any number of records. Previously some of them, e.g. **Item types**, had a limitation of 50 records.

## INTEGRATIONS

- Filmfriend is now supported - patrons can be authenticated in order to stream movies.
- Munzinger is now supported - patrons can be authenticated.

## NOTIFICATIONS

- Notification date and notification fee is now included on reservation notifications.
- Item price is now printed on bills even if no replacement fees are set up.

## PATRONS

- It is now possible to change membership type for an existing membership. If a change of type leads to modification of the cost for the ongoing period, that must be handled manually.

## ALMA

- If a manifestation lacks target audience and/or literary form, no default is set in Arena.
- Availability and sort order of periodicals is improved.

#### SELF-SERVICE

- SIP2 now sends the correct currency.

#### ACQUISITIONS

- Some settings for VAT have been added but not yet in use.

## Version 1.6.5.3

Release date: February 20, 2020

For some new pieces of functionality in this release, a few texts in the user interface are displayed in English even when another language is selected.

#### ANALYTICS

- Top lists can be created, based on most borrowed or most reserved titles. The top lists created in Quira can be displayed in Arena. Learn more in the online help: [Top-Listen](#)
- Age groups can be created for analytical purposes, to be used to group data in reports based on age groups rather than patron age. Learn more in the online help: [Verwenden von Altersgruppen für Berichte](#)
- Analytical data can now be filtered to support creating reports that include/exclude values only from some groups, such as item types, manifestation types or patron categories.

#### CIRCULATION

- The patron information in the **Scan items** window now includes information about the number of open loans. If there are trapped reservations on the pick-up shelf for the patron in the current branch, this is shown in an information banner.
- You can open the patron details by clicking in the context menu for an item on loan in the **Scan items** window.
- Items that could trap for ILL Out can be allowed to be checked out to other patrons.

#### DEBT REMINDERS

- Reminders for outstanding debts is now supported. Four levels of reminders can be sent if the function is configured before a final bill. Learn more in the online help: [Zahlungserinnerungen](#)

#### DEBTS

- It is now possible to see in which branch a debt has been created.

#### BILLS

- Calculated overdue fees that are included in bills for replacement charges are now saved in the bill information that is presented in the patron details.

#### INTEGRATIONS

- Discard lists from Onleihe can be fetched and titles on the list can be handled using scheduled jobs. Titles with items, reservations or eLoans will not be deleted.

#### ACQUISITIONS

- Norway: Shelf mark from order information from Biblioteksentralen has been added.
- A number of improvements have been made for acquisitions, for example handling of currencies, registering of delivery- and invoice addresses. The use of these will follow in coming releases.
- Item receipt types can be created to support different methods of obtaining items (e.g. invoice, gift, deposit, exchange). The use of these will follow in coming releases.

#### COLLECTIONS

- Relator codes and relationship designators in metadata are supported on work and expression levels.
- Improved performance particularly when displaying periodicals with many issues.
- Further improvements to avoid the problem with some search terms not working. Please contact Axiell if problems still occur!

#### ARENA

- It is possible to reserve periodicals in Arena.
- Periodical issue numbers are presented in **My loans**.
- More than 50 loans can now be displayed in Arena loan history.
- Availability in the Arena hit list is now based on all items, not only the ones belonging to the branch of the Arena user.
- Enhanced information in **Payment history**.
- Items with manually set status are no longer displayed in Arena.

#### PATRONS

- It is possible to open a patron that lacks account and add it.

## Version 1.6.3.4

Release date: January 13, 2020

#### PATRONS

- The functionality for young patrons that are assigned guarantors has been reworked and improved. One purpose is to be able to send notifications to guarantors rather than to young patrons. For more information, please see the online help: **Verwendung von Erziehungsberechtigten**

#### BILLS

- Online payment of bills via Arena is supported, provided that the organisation setting is configured for settling bills at the library (not sent via integration to external party).
- Overdue fees of the date an overdue reminder is generated are added to print-outs and email reminders. For bills, the overdue fees can be included using a setting for the organisation. In the next release, you will also find the calculated overdue fees under **Debts and payments** for the patron.

#### COLLECTIONS

- External notes can be added to items in the collection, and these notes are available for patrons in Arena and self-service machines.
- Accession date can be set in order to create news lists in Arena. Not applicable to periodicals.
- The availability of internet resources can be checked using a scheduled job, that checks that URLs in manifestations are valid. Some translations for this functionality are missing in this release.
- Subjects for titles can be imported from Antolin. Some translations for this functionality are missing in this release.
- It is possible to delete items and all corresponding title information by scanning barcode/RFID, using bulk functionality and manually from manifestation details.

#### MESSAGES

- The message text editor has been enhanced with more styling options and a possibility to use a table to for example position parts of the message in the window of an envelope.

#### RESERVATIONS

- Reservation queue number is shown in Arena as well as in **Patron/Reservations** in Quria.

#### ANALYTICS

- Analytic reports can be marked as private or public. Private reports are only shown to the user that has created them, while public reports can be seen by all users with analytics permissions.
- A number of usability improvements have been made for analytics.

#### EVENTS

- A number of usability improvements have been made for events.

#### CONFIGURATION

- The user interface under **Admin** has been updated, and also includes a section for importing Antolin records and MARC records.

## Version 1.6.2.3

Release date: November 28, 2019

#### COLLECTIONS

- Support for setting item types to **Reference** has been introduced. For libraries already using an item type for reference items, this type can be updated with the property **Reference**, which will make all items of this type appear as “*Reference only*” in the public-facing library system such as Arena. For libraries that wish to start using the reference item type, please refer to the online help: **Metadata and items configuration**
- Covers for titles with EAN and ISSN are also displayed.
- Items with status **Bill paid** are not shown as available in the public-facing library system such as Arena.

- Search indexes are now divided into separate indexes per language to lessen the search complexity. This should remove the current issue that some words are not possible to search for. The search results are dependent on the locale set in the installation of Quria; not on the user interface language.
- When you click a series in Collections, a list of the complete series will be displayed, in the order of the titles of the series.

## ITEMS

- An item price can be set or edited in the item details - to set a price that is different from the price set in Acquisitions. It is the item price that will be used for example to calculate a replacement charge.

## ANALYTICS

- Custom fields can be included in reports.

## PATRONS

- The functionality and workflow for minor patrons has been complemented with a variant that doesn't require a connection to another patron at the library. To enable this, you have to check the **Guardian** checkbox in the settings for **Age groups**. If set, you can just enter a guardian's name when you add/edit patrons. All notifications to the minor will instead be addressed to the guardian. There will be more functionality regarding guarantors in the coming release.
- When editing many patrons at the same time using the bulk functionality, the **School** and **Class** fields can be used as search criteria, and these properties can be edited for many patrons at once, provided that the **School** functionality is enabled. Similarly, custom fields can be used when searching and editing patrons, as well as blocked patrons.
- An issue with not being able to select a standard patron category has been fixed.

## CIRCULATION

- Check-in, check out and renewal receipts can be sent via e-mail instead of being printed, provided that the patron has an email address registered. Default values for receipts can be configured per workplace. There are default message texts for this functionality that needs to be translated before e-mail receipts should be sent.

## DEBTS AND PAYMENTS

- Sorting of debts and payments as well as the default order which payment to clear first when paying a part of a debt have been improved. Also, it is possible to choose a particular debt to pay or delete.

## NOTIFICATIONS

- Separate automatic jobs are available for creating notifications:
  - One job for overdue reminders, reserved items and bills
  - One job for overdue warnings. This needs to be activated and a suitable time set.
- Notification printouts and bank files are grouped based on when the scheduled job is run, in order to create accurate grouping in these documents.

## SELF-SERVICE MACHINES

- Self-service machines using the SIP2 protocol support paying debts using cash.

#### INTEGRATIONS

- Patron lookup from Brockhaus is supported.

## Version 1.6.1.4

Release date: November 07, 2019

#### CIRCULATION

- One or several loans can be selected for renewal for a patron, using checkboxes.
- A new system status, **Bill paid**, has been introduced. This status is given to items that have been billed, after the bill has been paid. The status is shown in the item details and can be used as search criteria in item bulk handling.

#### INTEGRATIONS

- Two new integration settings have been added for Agresso in order to handle article descriptions: *AdminFee* and *ReplacementFee*.

#### COLLECTIONS

- Deleting many items at the same time (bulk delete) is supported.
- Filtering on manually set status, automatic status and temporary location when bulk handling items is supported.
- Some media type icons have been updated and some missing media types icons have been added. Tooltips have also been updated.
- It is possible to send automatic reminders for periodicals that have not been received according to the publication plan.

#### PATRONS

- Custom fields are supported in order to include customer-specific data for patrons.
- A status receipt of all loans that a patron has can be printed from **Scan items** and **Patron information**.
- To make it possible to distribute a patron address on several rows when printing notifications, to for example make the address fit in a window on an envelope, a new variable is introduced: *PatronAddressFormatted*.

#### ORGANISATION

- Branches can be configured as school branches, to make it possible to enter school and class information for patrons. This is the first step towards support for school library functionality, with more to follow in coming releases.

## Version 1.6.0.2

Release date: October 8, 2019

#### COLLECTIONS

- A complete flow for periodicals, including subscriptions, publication patterns, publication plans, reminders of delayed issues and more, is now included.

## BILLS

- If some external bills fail when sending overdue reminders, the failed bills will be resent every time overdue reminders are generated.

## ILL

- If the NCIP communication between libraries fails, the library can still handle the ILL and send the item back to the other library. (CH00027032)
- You can now search for library number also for ILL in. (CH00010747)

## INTEGRATIONS

- Integration with SDB is now supported, so that either delivery note number or EAN can be used to get files from SDB.
- It is now possible to import eMedia records from Overdrive.

## CONFIGURATION

- Several improvements for consistency and improved usability have been made to the configuration and calendar pages.
- It is now possible to add a footer also on check-in receipts.
- System settings for loan history and reservation history are now available in Quria.

## RESERVATIONS

- Reservations has been refactored for consistency and clearer statuses.

## NOTIFICATIONS

- There is no longer a primary phone number for patrons - all phone numbers registered for SMS are used for SMS notifications. (CH00012132)

## RULES

- A new rule setting for period charges / hire charge makes it possible to define a fixed hire charge along with the existing charge per time unit.

## ARENA

- Support for extended ALMA catalogue record details: subjects, notes, literary form, extent.

# Version 1.5.0.1

Release date: September 18, 2019

## COLLECTIONS

- E-loans (from eHUB-compliant sources) are now supported.
- It is now possible to import files with MARC21-records from e.g. Overdrive directly in the user interface.
- An issue when opening a work after scanning a barcode has been corrected (CH00023435)
- An issue with some titles that could be scanned but not found in collections has been corrected. (CH00023637)

## BILLS

- The complete bills flow is now supported, including an integration to Agresso.  
Learn more in the user help: [Bills](#)

## CONFIGURATION

- Several improvements for consistency and improved usability have been made to the configuration pages.
- Organisational settings have been divided into two areas - the **Organisations** page intended for high-level settings that are rarely changed, and **Organisation settings** page with settings for ILL, billing, default patron category, banking (membership).
- Configuration settings of self-service machines are now available under **Configuration/Peripherals and integration/Local device settings**.
- It is now possible to set default patron categories that are used when a new patron is added. The setting is done under **Configuration/Settings/Organisation settings** and can be set on any organisational level. If the same default should be used for all authorities/branches within an account, you only need to set the default category on the account level.
- Handling of suppliers has been moved from the **Acquisitions** section to **Configuration/Acquisitions and periodicals**.

## NOTIFICATIONS

- A preferred communication language can be set for each patron, and messages will then be sent in that language, provided that language versions of message texts have been defined.
- It is possible to suppress some communication methods for messages, for example to allow some messages only to be sent as printouts but not as sms or email.

## RESERVATIONS

- You can now make reservations also in the manifestation view by opening the context menu.
- An issue with reservations of series has been corrected. (CH00021644)
- An issue with items on shelf list that did not exist in collections has been corrected. (CH00017519)

## ILL

- ILL in with passed pick up date cannot be checked out or force checked out. (CH00025860)
- The **Valid from** date for ILL can no longer be edited. (CH00021709)
- An issue with ILL renewals that in some cases would fail, has been corrected. (CH00022442)

## CIRCULATION

- An issue with items with status "Item in transit for reservation (cancelled)" that could not be checked in has been corrected. (CH00021626)

## ARENA

- In Arena, the due date is displayed when an item is on loan to let patrons know when the first item on loan is expected to be returned to the library.
- The item status is now more clear in Arena (CH00020653):
  - Items with a transaction status or a manual status are considered unavailable (not on shelf).

- Items with status “On order” are considered unavailable (not on shelf) and it is clearly stated that they are on order.
- Items with a manually set status or with transaction status “On bill” cannot be reserved.

## Version 1.4.6.1.1

Release date: August 30, 2019

### EVENTS

- You can create and administer events that take place in the library, such as author readings, workshops and community events. An overview of upcoming events in all branches of your account is presented on the Home page. In addition to single events, you can create recurring events as well as events that last for several days. Events can be open to anyone or require user registration.

Learn more in the user help: [Events](#)

## Version 1.4.6.1

Release date: July 9, 2019

### COLLECTIONS

- Item bulk handling makes it possible to edit the same piece of information for many items at the same time. You can also export data for selected items to a CSV file. In coming releases, this functionality will be extended to include more options for searching and changing items and also deleting items. Item bulk handling is controlled via permissions.

Learn more in the user help: [Handling many items at the same time](#)

### PATRONS

- Development of defining communication languages for message texts and for individual patrons has started. This has no function yet but will be delivered in coming releases.
- If the national card connection fails while a patron is added, a local card is created for the patron, without connection to the national card database. A warning is displayed to alert you to go back later and update the card.
- Development of providing a link to the patron details from several places has started. This feature will be further developed in coming releases.

### SHELF LIST

- A new check box - **Also show reservations that are available on the pick-up branch** - has been added to the shelf list, to avoid transporting items that are available locally (CH00015364)

### CIRCULATION

- When an item is ready for transfer, the transportation slip is marked for print by default, to avoid that the user has to click manually for printing.

### BILLS

- Development of bills in Quria has been started and there are some settings visible related to this new functionality. At this point only print-outs is supported, no integration against external parties.

**Note:** No configuration related to bills should be done at this time, as the complete flow is not yet supported.

#### SELF-SERVICE MACHINE

- When using the self-service machine, the trap number for reservations is now displayed in addition to the title.
- If the self-service machine is in offline mode, the due date set in the self-service machine is used for patron loans. When the self-service machine comes back online again, the due date from the self-service machine passed on to Quria, regardless of a possibly different calculation of due date in the Quria rules.

#### USER INTERFACE

- Various updates and improvements to the user interface.

#### PERIODICALS

- Development of improved handling of periodicals has started. The permissions regarding periodicals should not be enabled in this release.

## Version 1.4.5.2

Release date: June 17, 2019

#### PATRONS

- Bulk handling of patrons has been further improved, with a possibility to delete many patrons in one operation. When exporting patron data to CSV, more fields are included.
- Blocked patrons and patrons with an invalid library card (if patron identification is done with the card) are now prevented from making loans and reservations in all situations.
- Only overdue reminders for children are sent to the guarantor instead of to the child. Reservation notifications and Overdue warnings are sent to the child. If no guarantor exists, all messages are sent to the child.
- It is now possible to send direct e-mail messages from patron information in addition to SMS messages.
- It is now possible to renew/renew all from the patron even for patrons without cards.

#### SHELF LIST

- The shelf list has been improved to become more user-friendly and intuitive, and a smaller performance improvement is implemented. Regarding performance, the work will continue in the coming sprint.

#### BILLS

- Development of bills in Quria has been started and there are some settings visible related to this new functionality. At this point only print-outs is supported, no integration against external parties.  
**Note:** No configuration related to bills should be done at this time, as the complete flow is not yet supported.

#### ILL

- It is now possible to return an ILL In to lending library without previous check-out to the patron.
- It is now possible to check out an ILL In again via self-service after a return.

#### RESERVATIONS

- A known issue in the previous release - when selecting the **Reservations** tab for a manifestation in Collections, the context menu was not available - is now fixed.

## Version 1.4.4.4

Release date: May 21, 2019

#### PATRONS

- Default patron category for self-registration can be set.
- Bulk handling of patrons has been further improved, for example with filtering options related to patron activity, number of loans and debt amount.
- A new message type, called Direct message, has been added to be able to send email or SMS to patrons using bulk handling.
- The national ID alone can be used when scanning or searching for a patron.
- An issue with a particular patron being locked has been fixed (CH00016699)

#### ARENA

- It is now possible to register as a patron on-line and immediately make reservations and borrow e-books according to library rules.
- The national ID alone can be used to log into Arena.

#### SELF-SERVICE MACHINE

- The national ID alone can be used to log into the self-service machine.

#### CIRCULATION

- The national ID can be used in the circulation window (Scan items) for identification.
- Dewey information that in some cases would be missing when printing labels is now included. (CH00015140)

#### COLLECTIONS

- You can access a work with all its details directly from the context menu in the dialogs for patron loans, reservations and acquisitions.
- Various improvements for import of MARC records.

#### ILL

- Facets are added to ILL In and ILL Out to improve the possibilities to find specific ILL records, for example status **Rejected** in ILL In (CH00014402).

#### KNOWN ISSUE IN THIS RELEASE

- When selecting the **Reservations** tab for an item in Collections, the context menu is not available. The issue will be fixed in the next release.

## Version 1.4.3.4

Release date: April 25, 2019

#### PATRONS

- Patron bulk handling operations makes it possible to for example send the same message to a number of patrons or edit the same piece of information for many patrons. You can also select several patrons and export patron data to a CSV file, to share with others or work with the data further on your own. There will be more functionality added in the coming releases. Learn more in the user help: [Handling many patrons at the same time](#)
- Age group transition: You can use rules to either notify or block patrons, that, because of age, no longer belong to their previous age group. Examples: a child that becomes an adult and no longer requires a guarantor, or a regular patron that becomes a senior citizen with different fees. Guarantor connections will automatically be removed if the age group transition routine is scheduled; no specific rules are needed for this. Learn more in the user help: [Example - age group transition](#)
- The number of PIN-code digits used for patron cards can be configured when Quria is installed.
- It is now possible to delete a patron category that is not use.

#### ANALYTICS

- Reports can be created based on patron activity. The activity analytics information starts to build after this version has been deployed. Learn more in the user help: [Creating a report based on patron activity](#)

#### ARENA

- It is now possible for patrons to configure that they accept to receive marketing information in Arena. This is visible in Quria and will be searchable in patron bulk handling in the coming release.

#### USER INTERFACE

- Some menu items have been updated for consistency and accuracy, especially in Norwegian.
- Context sensitive help connections makes it possible to open the accurate help topic depending on where you are in Quria when you click “?” or press F1 on the keyboard. The online help has been restructured and improved, and is available in English, Norwegian and German. The Learn page in Quria has been removed. You find the online help at [help.quria.axiell.com](http://help.quria.axiell.com/) / [help.quria.axiell.com/nb\\_NO](http://help.quria.axiell.com/nb_NO/) / [help.quria.axiell.com/de\\_DE](http://help.quria.axiell.com/de_DE/)

#### CIRCULATION

- An issue with initiating renewal after opening the patron information from the circulation window has been fixed. (CH00009146)

- When selecting **Renew all** for a number of items from the patron window, the **Handle items** window opens and all items that could be renewed are listed in the green success feedback box, and the items that could not be renewed are listed under **Items scanned**.

#### NOTIFICATIONS

- Notification contact settings has been improved and a default notification contact on system/account level must be defined. Notification contacts are used for addressing messages sent from Quria.  
Learn more in the user help: [Notifications](#)

#### DEBTS

- Overdue reminder debts have been improved with information about the titles that are delayed and the reminder level.

#### COLLECTIONS

- An issue with some items with incorrect record info has been fixed (CH00010170).

#### ILL

- A new default patron category for ILL Out patrons is added.
- Various ILL improvements (CH00012267, CH00013429).

## Version 1.4.2.6

Release date: April 1, 2019

#### SHELF LIST

- The shelf list has been optimized, for example by excluding ILL in reservations.

#### COLLECTIONS

- Quria now supports fetching covers for EAN and ISSN numbers. A re-indexing of Arena is required to show these covers in Arena.
- An issue with items and manifestations that could not be edited has been resolved.
- A link to e-media is available from the manifestation information of a work, and clicking the link opens the item in a new browser tab.

#### PATRONS

- Automatic jobs for patron membership maintenance have been added. For manual payment, debts are created. For automatic payment, bank transfer is created.
- An issue with some items on the reservation shelf getting an old reservation number has been fixed.

#### CIRCULATION

- An issue with expanding items in the **Scan items** window when the shelf list was open in the background has been fixed.

#### SCHEDULED JOBS

- When opening **Configuration/Admin/View status for scheduled jobs**, all jobs are listed.

# Version 1.4.1.1

Release date: March 12, 2019

## COLLECTIONS

- Facets for search results has a new sorting, and the facet **Literary form** has been added.
- Additional information about expression and manifestation details is available under **Record information**.
- Major modifications have been made regarding manifestation title information. When you add/edit a manifestation, the title information is divided in four separate fields:
  - Title proper
  - Other title information
  - Number of part
  - Name of partThese fields then construct the manifestation title information that is shown all around Quria, e.g. in reservations, loan information and shelf list.
- An **Apply** button has been added to the Edit work/expression/manifestation dialogs in order to save changes without closing the dialog.
- Fixed an issue with Last check-in (in item information) that would under some circumstances not display the correct information.

## PATRONS

- Patron search (new button) can now easily be performed directly from the circulation window, reservations wizard and Add manual ILL in.
- Patron membership: Some libraries offer patrons to become members at the library, possibly including a fee. This functionality is enabled at the time of installation of Quria. When a membership expires, the patron cannot make reservations or check out items unless the membership is renewed.
- In **Patron connections** the type will now be shown - guarantor or not.
- Patron notifications: If a guarantor connection is set up for a child patron that is about to get a notification, the message can be addressed to the guarantor, including information about the name of the child. The actual notification and debt, however, remains on the child patron.
- Patron notifications can be filtered per branch. The branch you are signed in to is displayed as default. This makes it possible to distribute the handling of print outs to respective branch.
- The transaction log in item information includes information about which notifications have been sent.
- NCIP LookupUser is now supported in Quria.

## RULES

- Rules with a numerical setting can now be assigned the value 0. This makes it possible to for example set the reservation fee to 0 for a certain patron category, while other patron categories get an amount.

- When the rule Notification block has been realized so that a patron is blocked in Quria, the patron can still sign in to Arena, but the reservation button will not be shown. Once the block has been revoked, it will be possible again to reserve items in Arena.
- When an overdue item with a hire charge is checked in, the overdue fee is generated instead of a new hire charge.
- There is a delay of a maximum of 5 minutes for any rule that is added, changed or deleted to have impact.

#### CONTEXTUAL HELP

Development of context sensitive help connections from Quria to the online help has been initiated and will be launched at a later point.

## Version 1.4.0.4

Release date: February 18, 2019

#### RULES

- Configuration of rules has been refactored for a more intuitive flow and with a closer connection to notifications. Some rules have default values.
- Future rules are shown and historical rules can be displayed if needed.
- It is possible only to change rules for the top level and for the current account. To change rules for another account, you need to be signed in to that account.
- There is a new rule for patron control: notification block.
- Some rules can be set up with an absolute date.
- Existing rules need to be transferred to the new model.

#### COLLECTIONS

- Expressions and manifestations that need to be merged or moved, can now be taken care of while all items and information such as loans and reservations for the underlying items are preserved, using the **Collections basket**. Please see the Quria help for details: **Collections basket**
- An issue where some items and manifestations could not be edited has been fixed

#### PATRONS

- Patron connections has been introduced to make it easier to create relationships between patrons, for example when children require a guarantor. You set up patron connections on the **Patron data** tab in the patron details. Existing guarantors are merged to the new model via a script.
- Overdue warnings are visible in patron details.
- It is possible to delete a patron account with a national card either from the current library or from the national card database (Norway only). If a patron account that exists at other libraries is deleted from the national card database, this account becomes a local account at the other libraries.
- Using a gender-neutral patron category is supported in preparation for when also supported by the National Card service.

#### CIRCULATION

- Library number is included on transportation slips.
- Fixed issue with scanning several books that would sometimes get the same status (send to another library) when they should not.

#### DEBTS AND PAYMENTS

- Card payment alternative is supported, and receipts are printed for payment.
- When a debt is paid, the information on the screen is updated directly.

#### SHELF MARKS

- When a new item is created or manual location information is set on order items, the shelf info on manifestations is copied into the item shelf field. The user can change or delete the value if preferred. If the shelf mark is deleted from the ordered items, the manifestation shelf mark is no longer set. The list of ordered items only shows the ordered item shelf mark, not the manifestation shelf mark.
- When an item is imported, the item shelf is set based on manifestation shelf.
- Spine labels do no longer contain shelf marks from the manifestation details. An empty shelf mark does not render anything on the label.

#### RESERVATIONS

- Trap number for reservations is added to the patron details.
- The responsiveness of the shelf list has been improved for use also on smaller screens such as iPads.
- Additional information such as year, edition and subtitle, as well as pick-up branch, is now displayed in the shelf list.
- An item with any status is excluded from the shelf list.
- Fixed an issue with the reservation queue that would not always be in chronological order.
- It is now possible to edit comments on reservations.

#### NOTIFICATIONS

- Notifications for overdue reminders, reservation notices and bills can be printed for patrons that don't have an email address or a phone number for SMS registered, provided that the permission Patron/Notifications is enabled for the user. Once the **Print** button is clicked, you have to check **Show handled files** to show the message. Handled print-outs will only be visible in 7 days.

#### ILL

- Patron information is preserved when an ILL is cancelled by owning library.
- ISIL number is included also on ILL out transportation slips.

#### ACQUISITIONS

- An issue with closing the window for programming RFID items has been fixed.

#### ARENA

- Performance improvement for cases when patrons have more than 30 loans.
- An issue with titles of periodicals that are displayed in Curia but not in Arena has been fixed.

## Version 1.3.3.6

Release date: December 17, 2018

### SALES

- Selling of for example pens or printouts is now supported. You can sell articles not only to registered patrons, but to any library visitor. Access to selling articles and to registering articles for sale is defined via roles. Learn more in the user help: [Selling articles](#)

### ILL

- It's now possible to cancel an ILL request if it has been trapped, even if the trapped reservation have passed the pick-up date by clicking on **Return to the library**.
- Previously, pick-up branch for ILL was configured per account. Now it should be configured per branch to make each branch a specific pick-up place.

### ARENA

- An issue when patrons with many loans could not renew loans in Arena has been solved.

### DEBTS

- When a patron pays debts partially, the oldest debt is now paid first.
- General improvements have been made to the user interface of patron's debts.

### METADATA

- Several improvements have been made for handling of periodicals.
- Periodical expressions can now be deleted after all its manifestations have been deleted.
- You find the menu choices for editing a work and for viewing its raw data next to the title on the title details page.

### PATRONS

- Home branch for patrons has been replaced with **Default pick-up branch**.
- Patron comments have been replaced with patron notes. Existing comments will be converted and get the date from when Quira was updated with this release.

### MESSAGE TEXTS

- Default message texts are included for reservation notice, overdue warning, overdue reminder (5 levels), overdue reminder for reserved items and bills.

### SELF-SERVICE MACHINE

- Email receipts can now be sent when checking out from the self-service machines.

## Version 1.3.2.2

Release date: November 15, 2018

### PATRONS

- The patron module has been remodelled for consistency and performance. The patron dialogs and the flow for working with patrons have been updated.
- When adding a card number for a patron, the checkbox **National** is checked by default.

- When adding a new patron and entering a national identity number, patron information from the national card service is automatically filled in.
- When adding a new patron and entering an existing library card number, patron information from the library system is automatically filled in.
- Titles can be included in patron information, provided that they are added under Configuration. Currently, you cannot remove any titles you have added under Configuration.
- You can now search for a patron using their phone number, regardless of how the phone number was entered for the patron. You always search for phone numbers using numerical values only; no special characters or spaces.
- You can now search for patron cards that include special characters.

#### METADATA

- The workflow for adding a new work, expression or manifestation has been slightly updated. It is also possible to add new contributors, creators and publication events on different levels.
- It is now possible to add, edit and delete series information for a manifestation.
- It is now possible to edit title, creator and content type for works, and if the changes result in a duplicate, you will get a warning.
- If you add a duplicate ISBN number when adding or editing a manifestation, you will get a warning.
- When adding or updating an expression or a manifestation, you can click the **Set expression type** or **Set manifestation type** button to automatically determine the expression type or manifestation type based on the RDA type selections.

#### SELF-SERVICE MACHINE: SIP2 PROTOCOL

- The SIP2 protocol has been extended to include gender and age (birth date).

#### HANDLING OF DUPLICATED LOANS

- Items with duplicate loans are no longer disabled.

#### ILL: NCIP ENCODING ERROR

- An encoding error for NCIP against Bibliotekssøk is now resolved.

## Version 1.3.1.2

Release date: October 29, 2018

#### METADATA

- You can now work with cataloguing by manually adding new records to the collection. You do this by clicking the **Add new record** button in Collections.
- Intended audiences and series have been added for manifestations.

#### PRINT QUALITY

- The print quality of labels and receipts has been improved.

#### CONFIGURATION

- Configuration of departments has been updated and it is now easier to connect sections to departments.

## USER INTERFACE

- Dropdown lists in many places in the user interface have been supplemented and are sorted alphabetically in user language.

## Version 1.3.0.2

Release date: October 04, 2018

### ACQUISITIONS

- The problem with automatic orders not imported to the Acquisition module is solved.

### ANALYTICS

In this release you can do Units count and Monetary count statistics too.

- Units count - to create a report based on numbers of items, manifestations or patrons
- Monetary count - to create a report based on anything related to financials such as orders or debts

For more information - Go to [Quria help page](#)

### CONFIGURATION

The Configuration Settings page

- The page is reorganized into a more logical grouping of functions. There are sections for:
  - Organisations
  - Metadata and Items
  - Patrons
  - Circulation and Notifications
  - Printers, Barcodes and Selfservice
- Unused functions have been removed from the page.

### Calendar

- Now shows all registered closure periods

### ITEMS

Check out, renew and check in will clear item status

- Until now only check in has cleared item status. Now check out and renew will clear the item status too.

### LEARN

Changes to Learn page

- The search box and the shortcuts info are removed from the startpage. Go instead to User guide. Search e.g. for *Shortcuts*.

## Version 1.2.1.2

Release date: September 05, 2018

## COLLECTIONS

- Facets are now arranged in a more relevant order: Creator, Subject, Target audience, Publication year, Media type, Language.

## METADATA

- Add/edit/delete: Now you can delete works too. When you delete the last expression, the work title will be deleted as well. At the moment you will not have a warning for this.
- The problem not to be able to delete manifestations without holdings, is now solved.
- If the role gives you permissions to add/edit/delete work, a new button in Collection **Add new record** will be active next to the button **Import new record**. In the next release this functionality will bring you cataloguing possibilities. At the moment this functionality is not completed.

## ITEMS

- Improved Temporary location: In Temporary location it is now possible to set an item type e.g. ikkelån - and a due date (optional).
- If you set a due date, the temporary location will be valid as long as the due date is not reached. That means that the item can have several checks outs without losing the temporary location. When reached - or if no due date is set - the temporary location will be removed on the next check in of the item.

## ACQUISITIONS

- To make the navigation more user friendly some changes have been done to the Acquisition-info in Collection - View further details:
  1. The tab "Ordered items" has been removed
  2. The text "X items on order" has been replaced with "X unallocated items on order" Some items can have a location set. The X is the number of ordered items without a set location
  3. The text for Status "New item" has been changed to "Item on order".

## ANALYTICS

- The new module Analytics replaces the initial Statistics functions and gives you much more functionality.
- In this first release you can create dynamic statistics within Occasions count, which includes statistics for Patron, Circulation, Reservations, ILL, Titles, Item, Item location change, Notifications etc. In the next release you will be able to do Units count and Monetary count statistics too.

For more information - Go to [Quria help page](#)

## Version 1.2.0.1

Release date: June 27, 2018

## ACQUISITIONS

- When adding a new supplier Order number prefix is now mandatory - in order to create a unique order number.

- The Set location value is going to be more pre-filled:
  1. An order without any pre-filled value, will show the latest Set location value from the previous order.
  2. An order with already pre-filled value will show the existing value in Set location.
  3. If multiple orders are selected, Set location will always be blank.
- The original barcode from the supplier will be transferred to the order in Quria.
- You can now filter your search result: Ordered, Finished, Cancelled
- Records marked «Kulturfond» in marc field 532\$a, will be shown in Item details with the Item type “kf”.
- When orders are created, information about Price and Supplier will be shown in Item details/Acquisitions information.

## ITEMS

- Delete multiple items: in Scan items you can delete multiple items at one time. You will get a warning before deleting. Items on loan, items trapped to a patron, new items on order, ILL IN items and items belonging to another account will not be deleted.

## COLLECTION

- Information about Extend, e.g. number of pages, will be shown in a new column in Manifestation. If UI is too small to show all columns, this column will be hidden.

## ILL

- The automatic ILL function has been added to Quria.
- You can filter ILL IN and OUT on ILL status:
  - Open (includes all active ILL status before Cancelled and Completed)
  - Cancelled
  - Completed
- Automatic generation of BaseBibliotek.
- You can reprint a transportation slip if you miss to print one.

## NOTIFICATION

- Automatic generation of notifications.

# Version 1.1.5

Release date: June 07, 2018

## ACQUISITIONS

- When receiving an item and selecting Set location, the latest Set location choices are now pre-selected. If you select anything else than the pre-selected, all values are cleared.
- You can now preset the item type for orders in Set location and type.
- The status of an order line is based on the status for the items included in the order line and not on the status for the total order (if there are many order lines in an order). As soon as all items in the order line have been checked in, the order line gets status Finished.

## CIRCULATION

- You can now force checkout and force renew when a patron is blocked.
- Item status is now shown in clear text in the circulation window along with other messages.

#### COLLECTION

- Facets now show five rows from a start. Clicking Show more expands 50 rows. A facet section can expand/collapse clicking the arrow next to its heading.
- Series are now also shown in Arena.
- There are buttons for next/previous work in the collection work page (title details). It is possible to use the -> and <- keys on the keyboard as well.

#### PATRON

- Validation for postal code has been removed to be able to import suppliers from different countries with their correct postal codes.
- You can now find patrons with names with hyphens in a simple search.

## Version 1.1.4

Release date: May 15, 2018

#### ILL

- The manual ILL function has been added to Curia.

#### ACQUISITIONS

- In the Acquisitions section you can now click on a row to open the “handle items” window for that order.
- You can sort the list by column (click column heading).
- There is pagination if the list of acquisitions is long.
- Large automatic orders are split to show each title on a row of its own.
- The section with Completed orders has been removed.
- When placing a manual order, the order number in the success message is now clickable opening the “handle items” window for that order.

#### RESERVATIONS

- You can now edit and cancel a reservation from the collection (the edition details window), not just from the patron.

#### PATRON

- The bug where deactivation of a patron’s ability to use self-service library did not have any effect has been fixed.

#### USER

- When you want to delete a role and that role is connected to users, Curia gives a warning message. If you want to go ahead, clicking Delete role will remove the role from all the users, and the role itself.

## Version 1.1.3

Release date: April 19, 2018

## SHORTCUTS

- New keyboard shortcuts solution. When you press the  key a shortcut field with the possible actions on the page pops up at the top of the page. Type your term to narrow the list as you type. No mouse navigation needed. Actions in the list are menu items, buttons and tabs.

## CIRCULATION

- The calendar for changing due dates, forcing renew and forcing checkout has been increased to 365 days.
- Bar codes are now printed in clear black (not grey as before).

## ITEMS

- When you delete expressions and manifestations in Quria, this is now reflected in Arena.
- It is now possible to force reservation of an item also when a patron is blocked.

## SHELFLIST

- Items that are not reservable are now shown in the shelflist with a warning triangle with status information.
- There has been bug fixes to the shelflist. The shelf list is now faster and shows a progress indicator when loading. After selecting department and section in the dropdown menus, you now need to click Refresh to filter the list.

## USER

- The interface for handling users and roles has been redesigned (adding, editing etc).

# Version 1.1.2

Release date: March 22, 2018

## PATRON

- It is now possible to combine search for more than one value in patron search, ex. name and address.
- In patron search, you can search with prefix for card number (cardnumber or crd) and national card number (nationalid or nid). With prefix, the search is not fuzzy. Without prefix, the search is fuzzy.
- Birth date is searchable in the local format of the logged in user. Ex: For user with English language the birth date is searchable as 20/12/1957; for a user with Norwegian the birth date is searchable as 20.12.1957.

## COLLECTION

- You can now delete a manifestation that has no items.
- You can now delete an expression that has no manifestations.
- It is now possible to directly from the title details page, the manifestation row three dots menu, add a new item.

## CIRCULATION

- It is now easier to cancel unclaimed reservations. Fetch the item from the reservation shelf when shelf time has passed and check it in. The reservation will automatically be deleted and if there are more reservations for the item the first one will get trapped.

## ACQUISITIONS

- Acquisitions are now searchable with prefixes and boolean operators (AND, OR).

## ARENA

The reservation button in Arena now only shows when it should be shown, according to rules and other circumstances.

## Version 1.1.1

Release date: March 5, 2018

### COLLECTION/METADATA

There is more information on the title details page.

- You can now search for series, and series is added (linked) on the title details page.
- Quira now uses more general terms for target audience instead of the many levels of target groups for children's books.
- When you edit subject or classification this is now reflected everywhere in Quira ("edit reference").
- Publication year is now normalised and searchable in intervals (search query term year, for intervals use year: 2015-2018).
- More search query terms added (see help article in English).
- ISBN search is not fuzzy anymore. This means that when you search for a number you find that record only.
- It is now possible to program all parts of a multi-item (all its RFID tags) with the same barcode.

## ACQUISITIONS

- You can now modify the number of copies in an order (delete entries).
- The information-i for availability on the title details page now shows more detailed information about availability, also with items on order.
- It is now possible to add a comment when cancelling an order line. The comment is shown when looking at the order.
- Some orders were duplicated, this has been fixed.
- Plus various usability improvements to acquisitions.

## USERS

- More permissions added, to use when creating different roles. All permissions available when creating roles are now in use.

## ARENA

- Contributor is now shown in search result and in CRD in Arena. It is possible to search for contributor.

- Bug where reservations and loans statistics were not shown for a title (even though configured) has been fixed.
- Media class icons are now shown in Arena.
- The correct availability information is now shown in Arena - available, unavailable or ordered item.

## Version 1.1.0.9

Release date: January 16, 2018

### ACQUISITIONS

- In orders with many order items, all lines are now shown (before only the first 80 lines were visible).
- Full MARC records are now imported in Quria (before they did not pass the filter defined), not only the mini records.

## Version 1.1.0

Release date: December 17, 2017

- Acquisitions, new feature.
- Edit metadata, new feature.
- Possibility of creating roles and permissions, new feature.
- The date format seen on the Quria screens is set according to the language set for the user in Quria.
- The date format in sent notifications, reminders etc., is set according to the language set for the tenant.
- Ex. English gets the format 22/11/2017 and Norwegian the format 22.11.2017.
- Audiobooks are now shown with media icon in Arena. Also, you can search for media type audiobooks in advanced search, and you can limit your search to audiobooks in the facets (Arena).
- Making a renewal in Arena now updates Quria statistics and transaction log.
- “Renew all” now renews only items that can be renewed.
- The problem where users got incorrect notification debts has been fixed.

## Version 1.0.22

Release date: November 29, 2017

### PATRON

- Deleting a patron from the system now deletes the patron cards as well.
- In patron details > reservations, trap number is now shown when the item is checked in at the pick-up branch (and not as before for trapped items in transit).
- You can now send a message to a patron’s phone from Quria, clicking the “Send message” button in the patron details window.
- In the email templates it is now possible to also specify patron card number, using the label {{PatronIdentifier}}.

## SEARCH

- In advanced search (collection), prefixes are now case insensitive.
- In advanced search (collection), the search code num can now be used both with and without dashes.
- Problem caused by pressing <Enter> in the search field in the circulation window without entering a barcode has been fixed.

## LABELS

- The spine label now has both shelf mark and section name.
- Fiction bibliographic labels now have full name of section. Non-fiction labels have dewey number.
- There are changes to the receipt and label printer settings and the default values for “Default width” and “Default height” need to be configured manually after the new deploy (Configuration section > Settings > Printers > Printer types maintenance).
- When printing, the printer settings should be set to:
  - Layout: Portrait
  - Paper size: User defined
  - Margine: None
  - Scale: 100

## CIRCULATION

- Trap number (sequence number) and last pick-up date are now displayed in the My reservations portlet in Arena (if patrons are allowed to pick up their own reservations from the shelf).
- The transaction log in item details now contains following events:
  - Checkin
  - Checkout
  - Renew
  - Trapped in transit
  - Trapped in own branch
  - Item in temporary location
  - Items temporary location cleared
  - Transferring
  - Item created
  - Item status changed to X
  - Item status cleared
  - Overdue reminder
  - Overdue warning
  - Reservations Notice reminder
  - Overdue Reminder - Reserved Item

Note that some of the notification texts will be improved in coming releases.

- When a patron is blocked or has blocked cards, items can now still be checked in.
- Shelfmark is now fetched from manifestation instead of expression.

## Version 1.0.14

Release date: October 26, 2017

### SEARCH

- You can now use standard search features (AND, OR, NOT, parenthesis) and prefixes when searching the collection. See [help page](#).
- Stop words are now searchable. For example, you can find the title “Jeg”.
- Searching a word containing special characters, for example a hyphen, no longer works in free text. For example, askeladden-eventyr gives no hit, and leaving out the hyphen gives too many hits. Such a search term can be phrase searched “askeladden-eventyr”. Note that phrase searches are not fuzzy searched.
- For a refined search (clicking a facet in the right column on the search results page) that results in pagination, the results shown were not correct on pages after page 1. This bug has been fixed.

### COLLECTION

- It is now possible to edit items directly when scanned in the circulation window: Scan the item and expand the row to see the item details. Click the pen to edit.
- On the title details page, when you click View raw data, you can now expand or collapse all raw data in one click using the button Expand all/Collapse all. Tip: When expanded, to easier find what you are looking for use CTRL + F and type the word(s) in the search square that opens.
- The field “Extent” is now presented in the edition details window, record data.
- In the shelf list, the icon now only shows the number that is available to pick, even if there are more items reserved for that title.
- It is now possible to proceed through the reservation steps using <Enter> instead of mouse-clicks.
- It is now possible to edit a periodical. Click Edit periodical under Record data in the edition details window.
- You now find information about both year and title for a periodical in the shelf list.

### PATRON

- The problem where you could not access the patron data for some patrons, has been fixed (two different reasons, both fixed).
- Payment history now shows all transactions, not only 20.
- It is now possible to change national card for a patron (change from using card A as the national card to using card B instead).
- It is now possible for a patron to change country from Arena.
- The PIN code is now synched with national card and can automatically be fetched next time a national card or account is added in Quria, after having been removed.
- Sort order for patrons is now correct, also when it comes to language specific characters.

## Version 1.0.11

Release date: October 17, 2017

- The bug with the shelf list where not all reservations appeared in the list, has been fixed.
- Self-service machine logging has been improved.

## Version 1.0.10

Release date: September 28, 2017

- The bug where you could not access/edit certain patrons has been fixed.
- SMS notifications now work using mobile phone numbers with or without "+", "00" or "47".

## Version 1.0.9

Release date: September 21, 2017

New in Arena

- Periodicals are now presented in Arena.

New in Quria

- When trapping an item, the "Print reservation slip" box is now ticked by default.
- When searching for a patron and there is only one hit, that patron details open directly.
- Bug where you could not access or edit some of the patrons, has been fixed.
- Statistics on home page has no longer a top limit of 50.
